Dear members of the Canadian Hemophilia Society,

The Canadian Hemophilia Society is collaborating with nine other national hemophilia organizations in a survey to measure the benefit of prophylaxis vs. on-demand therapy for the treatment of hemophilia A and B. The information gathered will provide our organizations useful data on the comparative benefits of long-term prophylaxis vs. on-demand treatments.

The survey is for people 20 to 35 years of age with moderate or severe hemophilia A or B. If you are eligible, we invite you to complete the survey on line. Individuals' answers are anonymous and confidential. The survey takes approximately 15 minutes to complete.

The other hemophilia societies participating are those in the United Kingdom, France, Ireland, Sweden, Poland, Romania, Netherlands, Australia and New Zealand. Results will be submitted to a medical journal and published in Hemophilia Today.

We encourage you to participate in the survey and thereby help the Canadian Hemophilia Society and hemophilia organizations around the world make the best case for optimal care. The more participants, the better the data. The deadline for participating is December 4, 2011.

To complete the survey in English, go to...
<http://app.fluidsurveys.com/s/study002EN/>

To complete the survey in French, go to...
<http://app.fluidsurveys.com/s/study002FR/>

Thank you in advance for contributing to advance knowledge about hemophilia.

Best regards,

David Page
National Executive Director
